About Us

SSBS ENGINEERS is into providing End-to-End solutions in the field of Fire Fighting and Life Safety Sectors. We help customers to reduce risk, assure safety and improve asset performance. We will enhance their profits through innovative services and solutions during the lifecycle of the asset with expertise of valid consultation.

We always deliver the highest quality Services and Solutions that ensure value and contribute to our customer's success with experienced management of **SSBS ENGINEERS**. We provide a full range of services that addresses customer's every need for integrated information. We will truly excel in everything we do, thus meeting and exceeding our customer's expectations in all aspects of technology and service.

Working with diverse cutting edge technologies, we provide customized solutions for Fire Fighting and Life Safety Sectors-Within house expertise, right from Concept - to Commission stage.

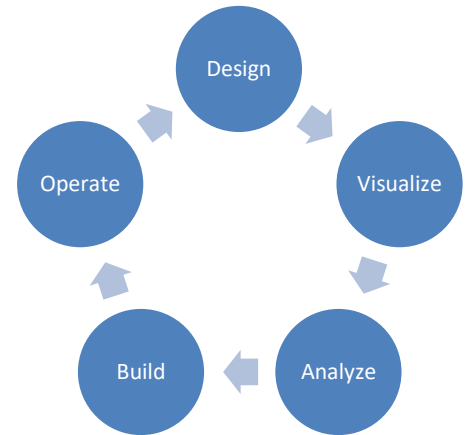

The value proposition offered by the company is simple and customer focused innovative solutions backed by an excellent customer oriented team that cares and takes ownership of the business information system requirements.

We wish to inform you that we are one of the leading Fire Fighting Company having more than 6 years experience in Design and Build.

Design & Build

As a design and build firm, we strive to bring together design and construction professionals in a collaborative environment, so as to complete all construction tasks more efficiently.

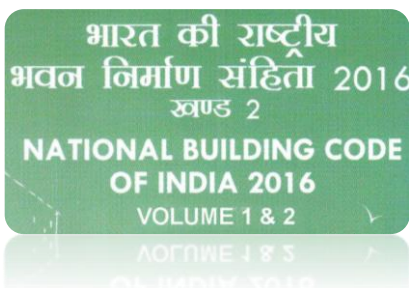

Instead of having several contractors and consultants, an owner has just one entity to deal with. Design revisions, project feedback, budgets, permits, construction issues, change orders and bills can all be routed through the design and build firm. This single point of contact allows a greater degree of flexibility for the owner.

SSBS ENGINEERS will leverage that flexibility for the benefit of the owner by continually refining the construction program, so as to maximize the value for the owner at the end of the project. This system also allows the owner to track progress of the project with greater transparency.

Standards

- ✚ National Building Code
- ✚ Indian Standard Codes
- ✚ NFPA Standards
- ✚ UL&FM
- ✚ Local codes and Standards by governing Authorities like, corporations and municipalities (* If applicable)

Fire Protection Systems

SSBS ENGINEERS offers a wide range of Water Based Fire Protection Systems like Sprinkler, Hydrant, Pre-action Systems, High and Medium Velocity Mist Systems and Tank Foam System to suit individual fire protection needs for fire fighting requirement, fire hydrants are the most commonly used water-based suppression system. Automatic water sprinklers are used where quicker responses are required. To protect expensive industrial equipment's, Automatic gas-based systems are used. The two most commonly used fire extinguishing gases are CO2 and FM200. Foam based suppression techniques are used in larger application.

We offer a solution for usage of these systems for greater risk coverage and minimum damages due to jeopardy.

Life Safety Systems

Intelligent Addressable Systems offer benefits in terms of speed of detection, identification of the location of fire and easier maintenance. Intelligent systems also offer tolerance to faults in the system wiring, which allows a single pair of wires to be used to connect multiple devices to the system, allowing cost savings in the wiring of large systems.

Conventional Fire Alarm System provides the earliest practicable fire detection and warning. This system consists of smoke or heat detectors at designated locations, to detect smoke or heat at the earliest during any outbreak of fire.

SSBS ENGINEERS
